amino TV LAUNCHER

UX Customization Reference

A visual reference to every launcher-owned INI option.

Bordeaux and Champagne showcase
Edition 1.0 | 22 October 2026

- Near-black plum
- Deep wine
- Champagne
- Ivory

Fresh, unretouched capture from Amigo7N device 2620031578004508. The user-applied showcase colors are verified against the device parameters.

Find the element you want to customize

23 options. Each has a dedicated reference page, an affected-region highlight and an example value.

04 **Main background**
home.background_url

05 **Operator logo**
home.logo_url

06 **Side-panel background**
home.side_panel_background_url

07 **Focused side-navigation icon**
home.button_focused_color

08 **Selected Home or Apps icon**
home.button_selected_color

09 **Idle side-navigation icons**
home.button_unselected_color

10 **Button text: inactive setting**
home.button_text_color

11 **Row headings and heading arc**
home.header_text_color

12 **Application name labels**
home.app_name_text_color

13 **Clock digits**
home.clock_text_color

14 **Focused action-button fill**
home.action_button_focused_color

15 **Idle action-button fill**
home.action_button_unfocused_color

16 **Focused action-button outline**
home.action_button_focus_stroke_color

17 **Bell, Sort and Add App artwork**
home.utility_icon_color

18 **Clock visibility**
home.clock_visible

19 **Settings entry visibility**
home.settings_visible

20 **Settings destination**
home.settings_component

21 **Live TV destination**
tvapp.package_id

home.app_pinning_list

23 **RED: open Live TV**
key.link.red

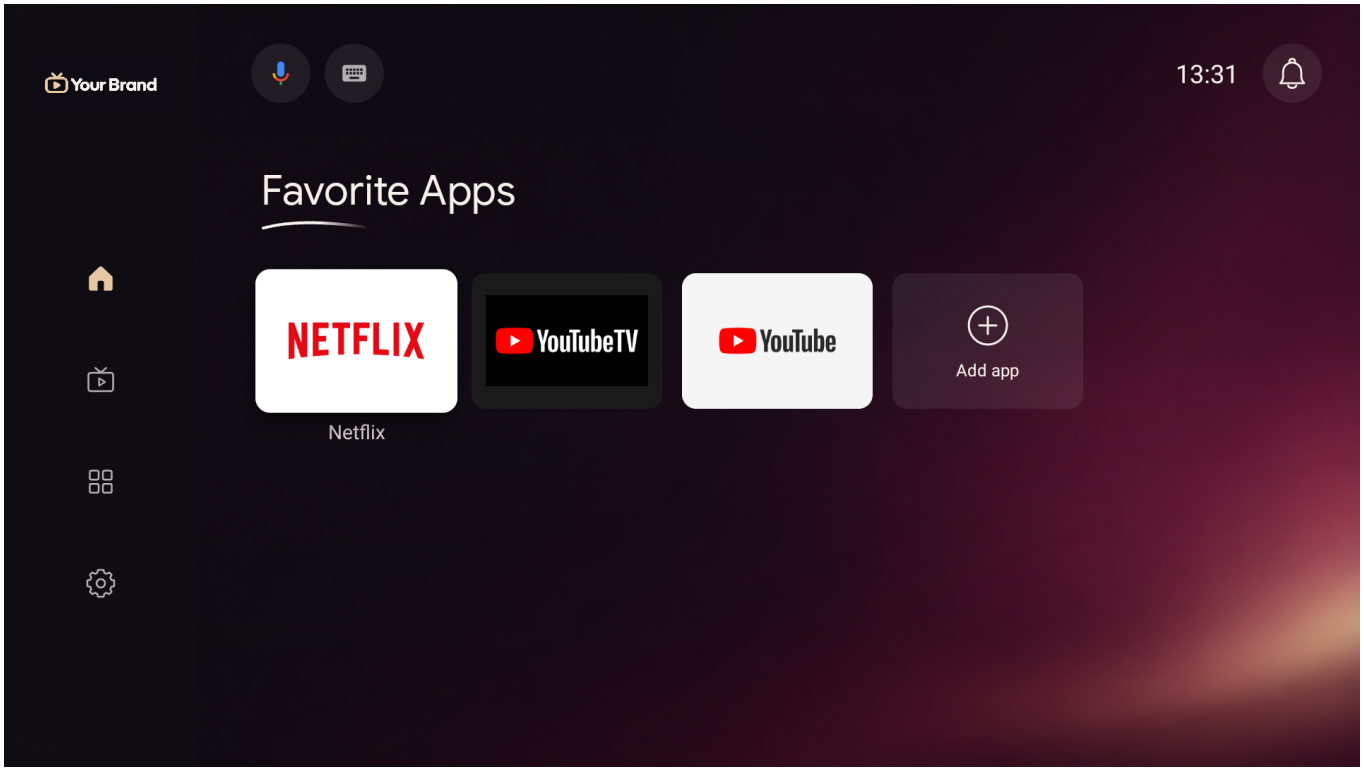

24 **GREEN: select Home**
key.link.green

25 **YELLOW: open All Apps**
key.link.yellow

26 **BLUE: open Notifications**
key.link.blue

Read the screenshots, then tune the values

BORDEAUX AND CHAMPAGNE

VERIFIED ACTIVE COLORS

- **Background direction** #100D14
- **Focused action fill** #3B1930
- **Selected / focus accent** #E7C7A3
- **Headings and clock** #F7F1EC
- **Application names** #E4D9DF

The artwork uses a dark plum base; the color of an image pixel is not an INI color default.

Device captures

Native screenshots taken on 22 October 2026. Thin mint outlines are document annotations, not launcher controls.

Source behavior

Defaults and limits come from the reviewed launcher. Product overlays and deployed values may differ.

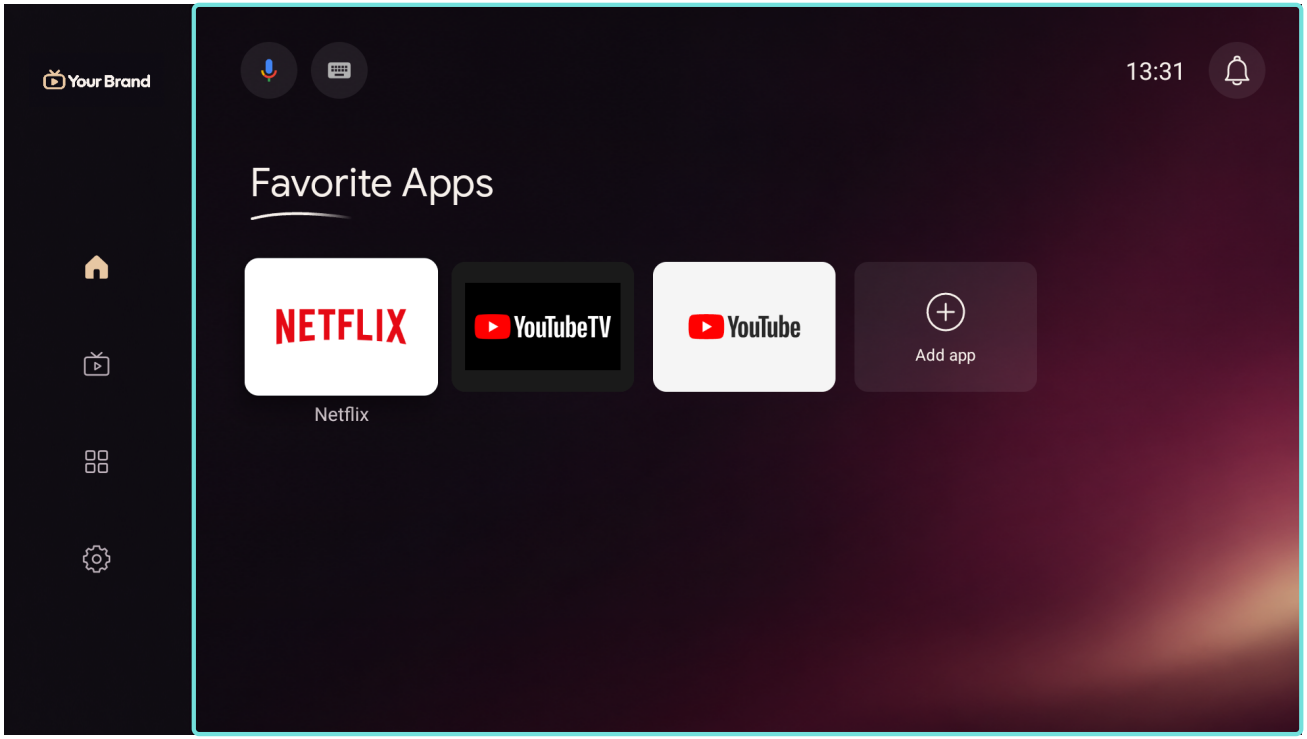

Illustrations

Visibility comparisons, color swatches and pin/key diagrams explain behavior; they are labeled separately.

Main background

home.background_url

Image URL

Device capture | 2620031578004508 | 22 October 2026

Supplied showcase asset

VISIBLE EFFECT

The main canvas behind Home and All Apps. The left navigation uses a separate image.

BASE DEFAULT / FALLBACK

Built-in main background

SUGGESTED EXAMPLE

https://example.com/showcase/bordeaux/background-bordeaux.png

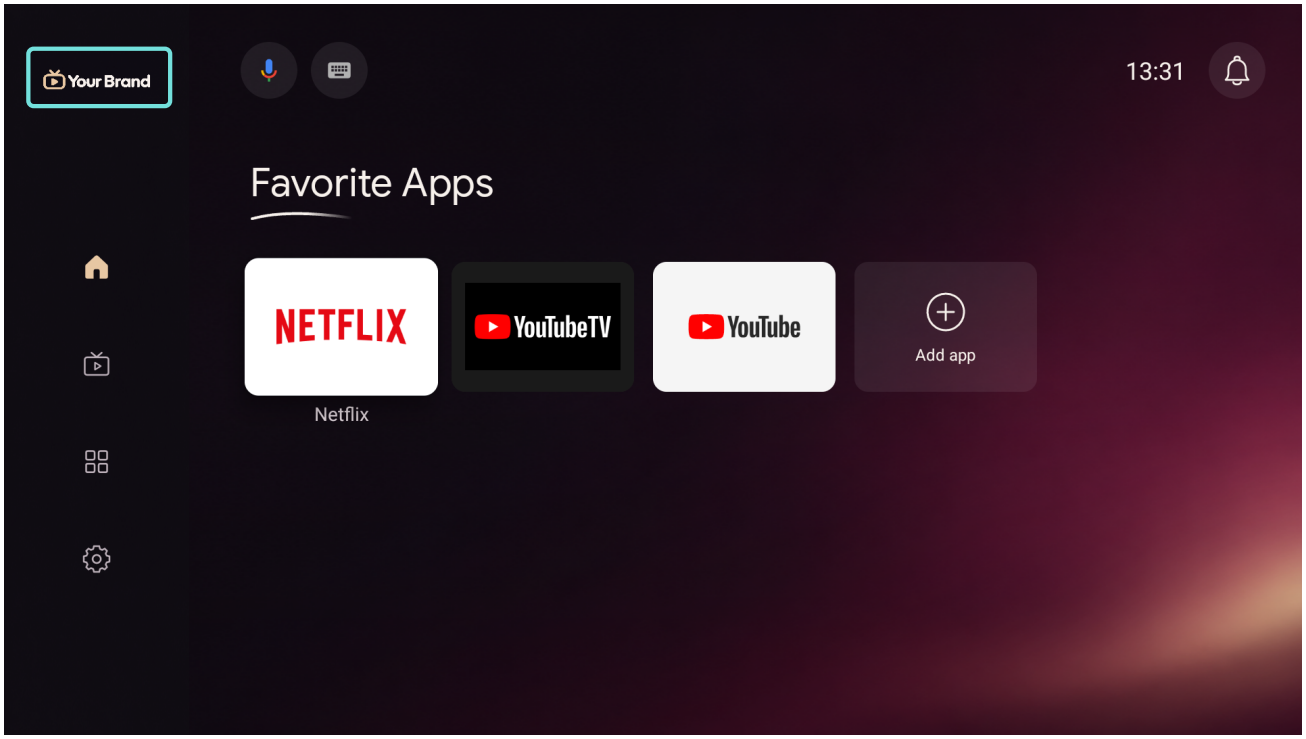

DESIGN ADVICE AND LIMITS

Keep the app grid and clock area dark and uncluttered. The supplied Bordeaux image places ambient light at the lower right. Use an HTTP or HTTPS PNG/JPEG. The background is stretched to its view; match the device aspect ratio. Use a new URL when replacing artwork.

Operator logo

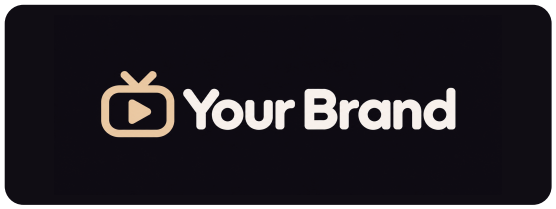

home.logo_url

Image URL

Device capture | 2620031578004508 | 22 October 2026

Supplied showcase asset

VISIBLE EFFECT

The operator logo at the top of the left navigation panel.

BASE DEFAULT / FALLBACK

Built-in Amino logo

SUGGESTED EXAMPLE

https://example.com/showcase/bordeaux/your-brand-bordeaux.png

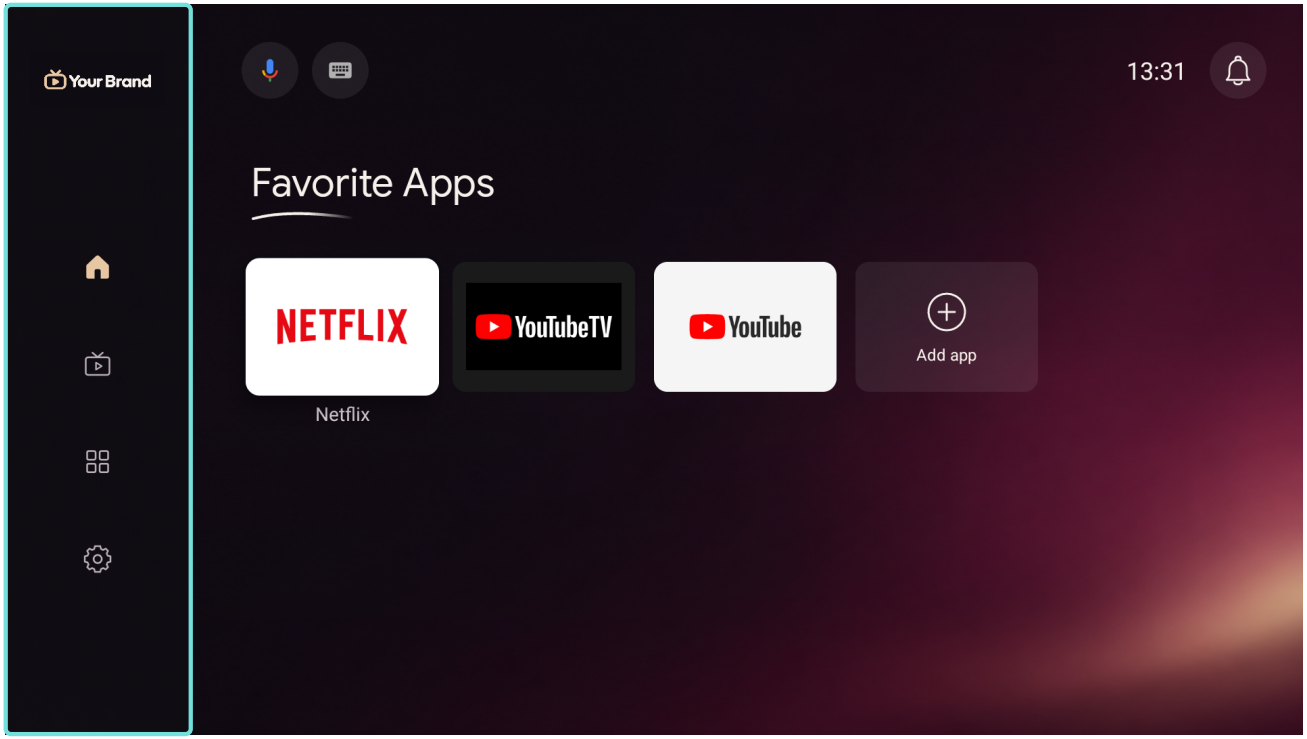

DESIGN ADVICE AND LIMITS

Use the supplied ivory Your Brand wordmark and champagne TV symbol. Opaque dark artwork avoids the earlier damaged alpha edges. The holder is 100dp x 40dp with fitCenter. Transparent outer pixels are trimmed by the reviewed source. Keep edges clean and padding modest.

Side-panel background

home.side_panel_background_url

Image URL

Device capture | 2620031578004508 | 22 October 2026

Supplied showcase asset

VISIBLE EFFECT

The entire background of the narrow left navigation rail.

BASE DEFAULT / FALLBACK

Built-in side background

SUGGESTED EXAMPLE

https://example.com/showcase/bordeaux/sidebar-bordeaux.png

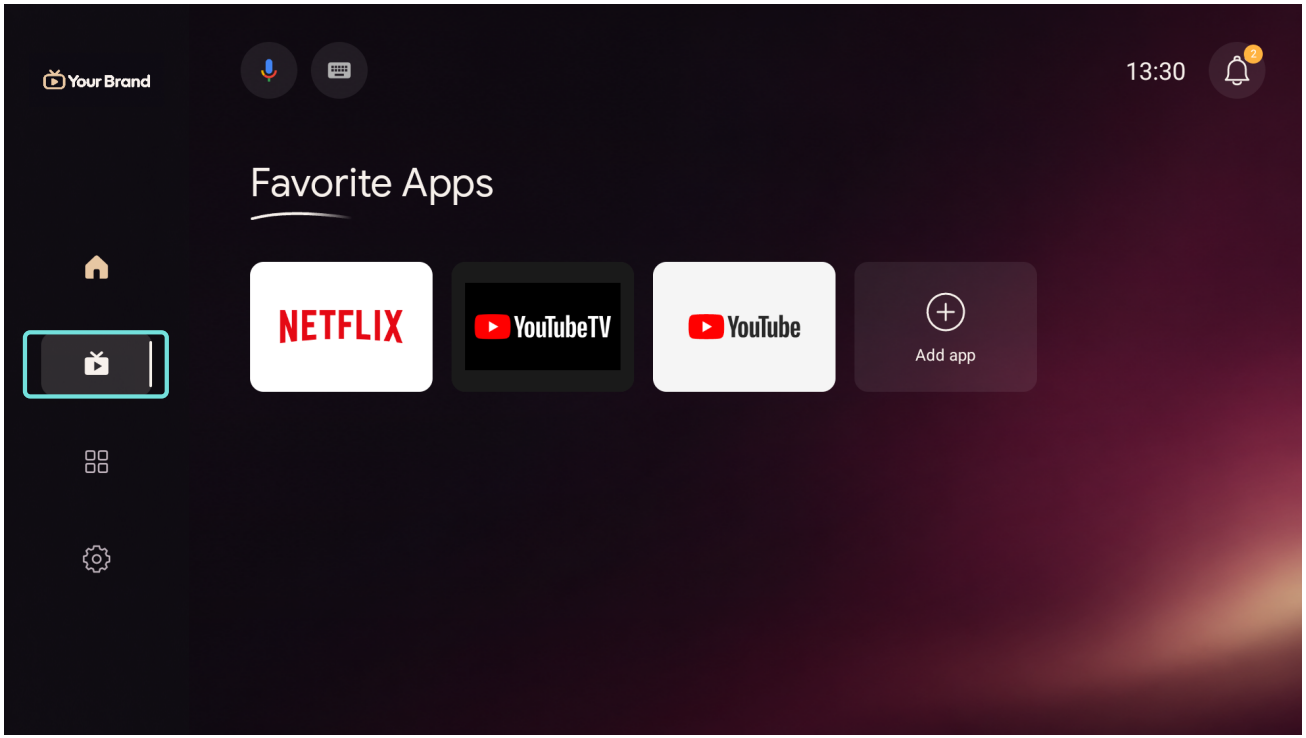

DESIGN ADVICE AND LIMITS

Use the quiet near-black sidebar image. Its URL must be different from the wide main-background URL. At 1920 x 1080 and density 320, the 137dp rail is 274px wide. A detailed wide wallpaper becomes visibly squeezed here.

Focused side-navigation icon

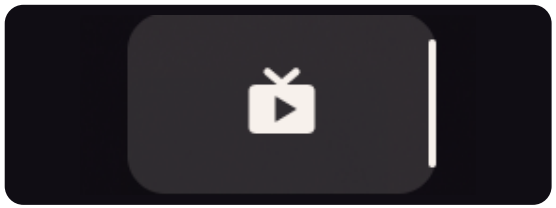

home.button_focused_color

Color

Device capture | 2620031578004508 | 22 October 2026

Enlarged detail from device capture

VISIBLE EFFECT

The focused side icon, its end indicator and translucent focus halo.

BASE DEFAULT / FALLBACK

#FFFFFFFF

SUGGESTED EXAMPLE

#FFF7F1EC

Illustrative swatch

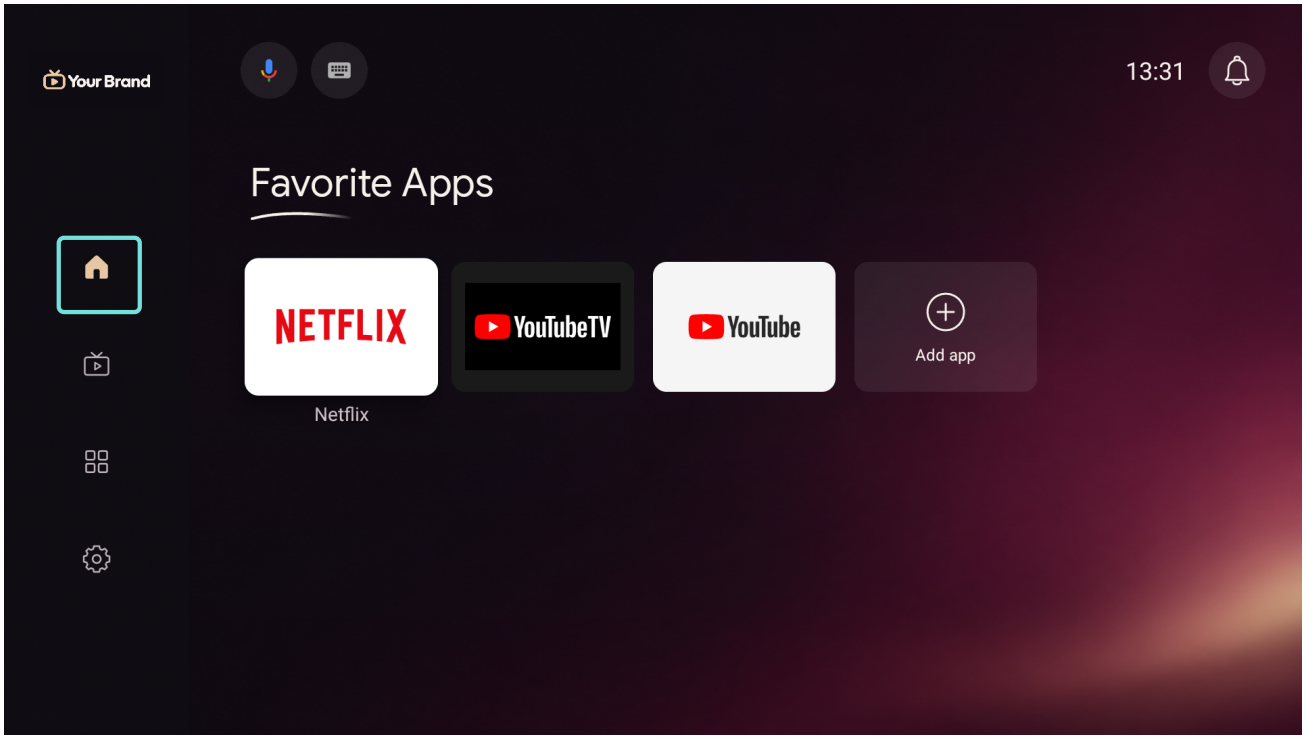

DESIGN ADVICE AND LIMITS

Ivory gives a clear focus state on the dark rail. Move focus to an unselected icon to inspect this option. Selected Home or Apps has priority over focused tint. Use Live TV or Settings to see the independent focused color.

Selected Home or Apps icon

home.button_selected_color

Color

Device capture | 2620031578004508 | 22 October 2026

Enlarged detail from device capture

VISIBLE EFFECT

The Home or Apps entry representing the active launcher view.

BASE DEFAULT / FALLBACK

#FF0098B0

SUGGESTED EXAMPLE

#FFE7C7A3

Illustrative swatch

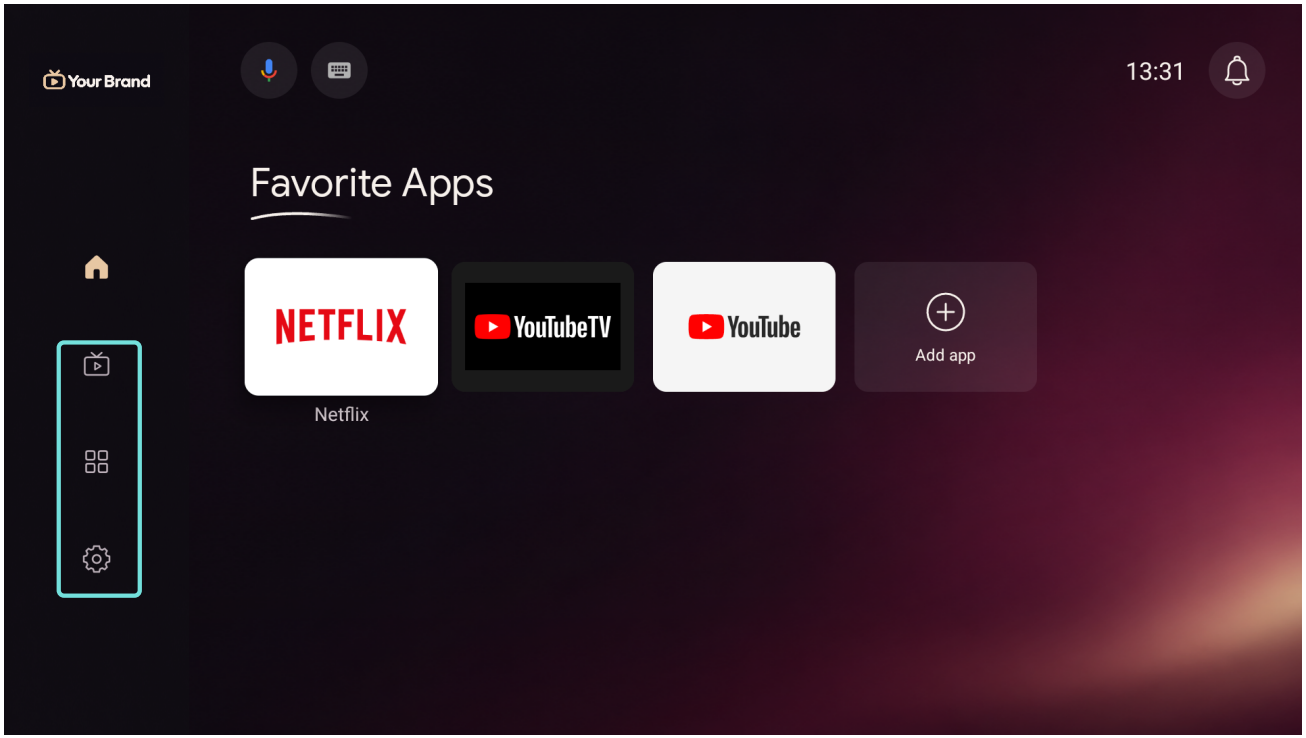

DESIGN ADVICE AND LIMITS

Champagne identifies the selected destination, even when focus moves back to an app card. Selected and focused are different states. This color wins when a Home or Apps entry is both selected and focused.

Idle side-navigation icons

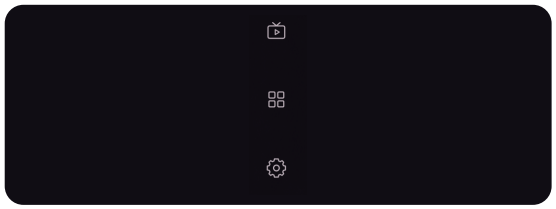

home.button_unselected_color

Color

Device capture | 2620031578004508 | 22 October 2026

Enlarged detail from device capture

VISIBLE EFFECT

Side icons that are neither the selected view nor the focus target.

BASE DEFAULT / FALLBACK

#FFF3F3F3

SUGGESTED EXAMPLE

#FFBBAFB8

Illustrative swatch

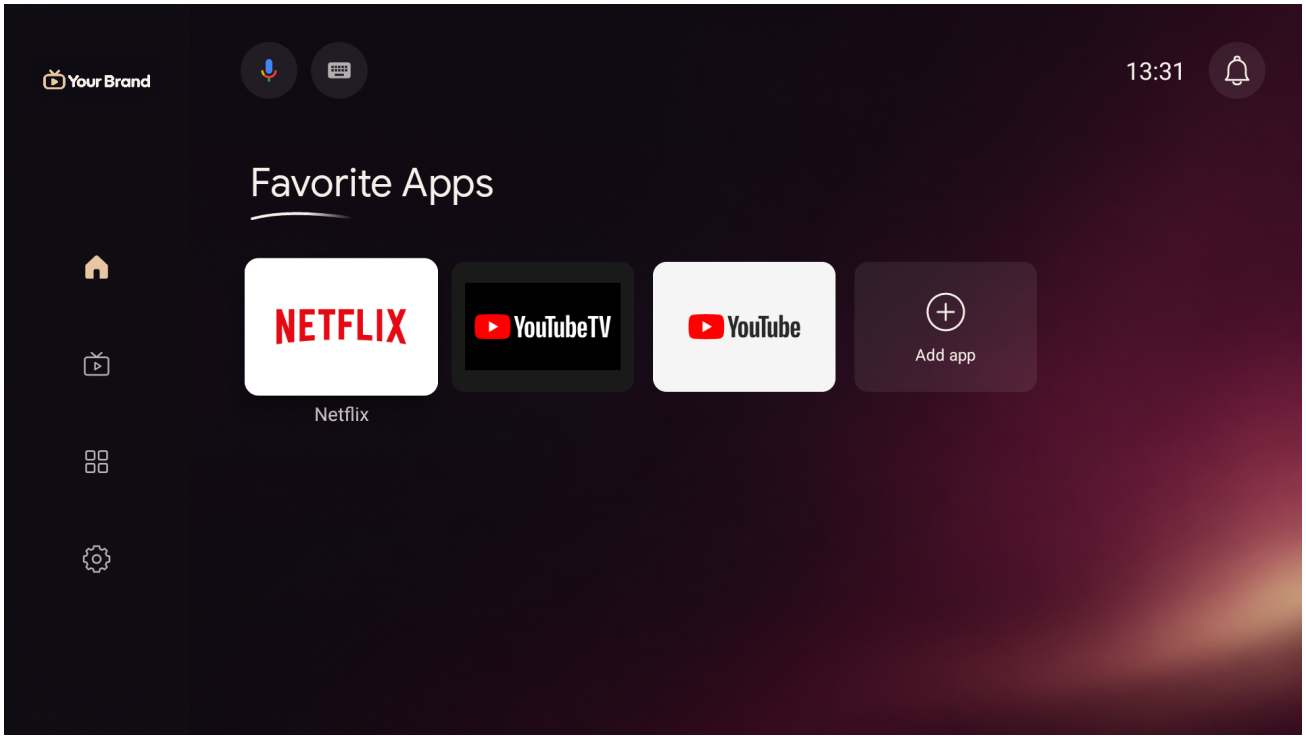

DESIGN ADVICE AND LIMITS

Muted gray-lilac keeps the rail readable while the active destination remains prominent. The Settings icon follows these navigation-state colors. home.utility_icon_color does not control Settings.

Button text: inactive setting

home.button_text_color

Color

Device capture | 2620031578004508 | 22 October 2026

Source behavior, not a device state

INI value

Stored > no UI consumer

VISIBLE EFFECT

No visible element in the reviewed launcher source. The parser stores this value but no UI consumer reads it.

BASE DEFAULT / FALLBACK

#FF0098B0

SUGGESTED EXAMPLE

Omit - no visible effect

Illustrative swatch

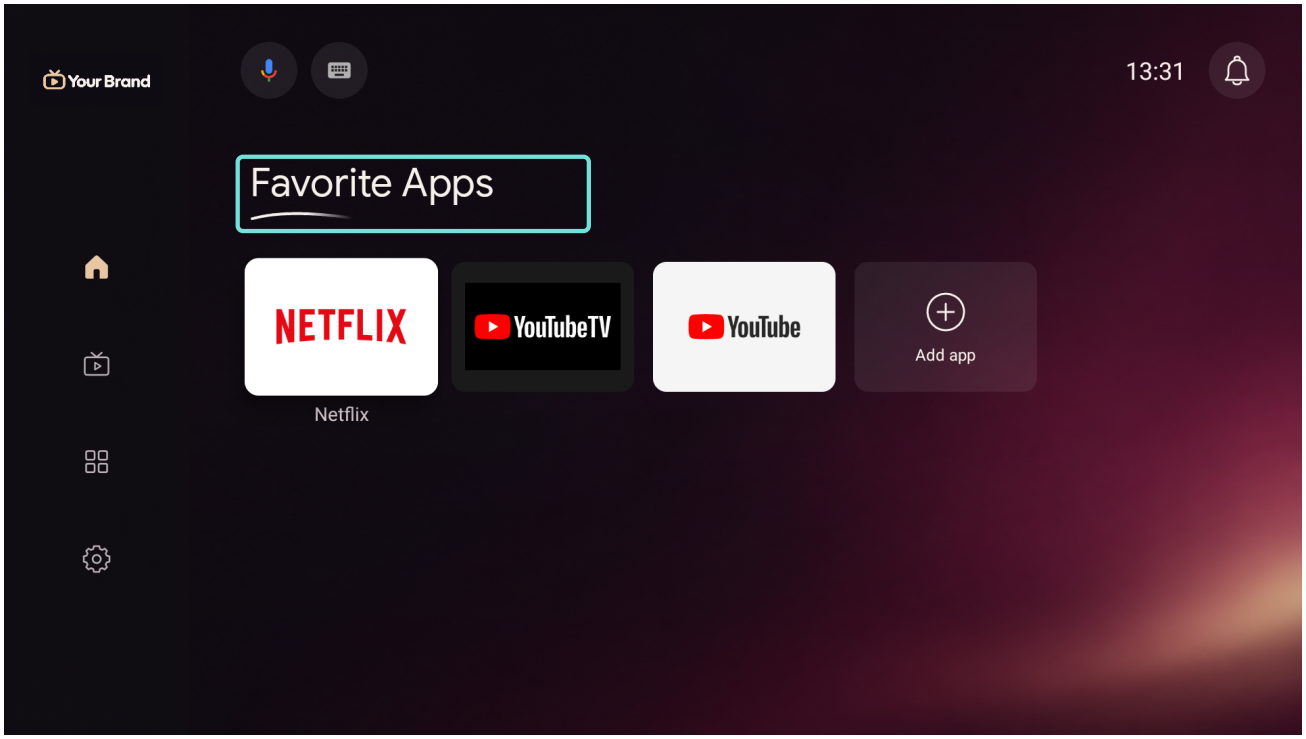

DESIGN ADVICE AND LIMITS

Leave this option out of the showcase profile. The diagram explains its current implementation status. Do not use it for Add app, navigation labels or panel titles. Add app uses the utility tint; Add Favorite App panel text is fixed white.

Row headings and heading arc

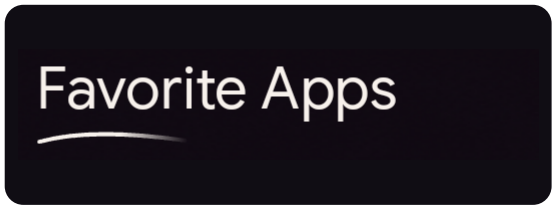

home.header_text_color

Color

Device capture | 2620031578004508 | 22 October 2026

Enlarged detail from device capture

VISIBLE EFFECT

Favorite Apps and Apps row titles, together with the decorative arc below each heading.

BASE DEFAULT / FALLBACK

#FFE5E5E5

SUGGESTED EXAMPLE

#FFF7F1EC

Illustrative swatch

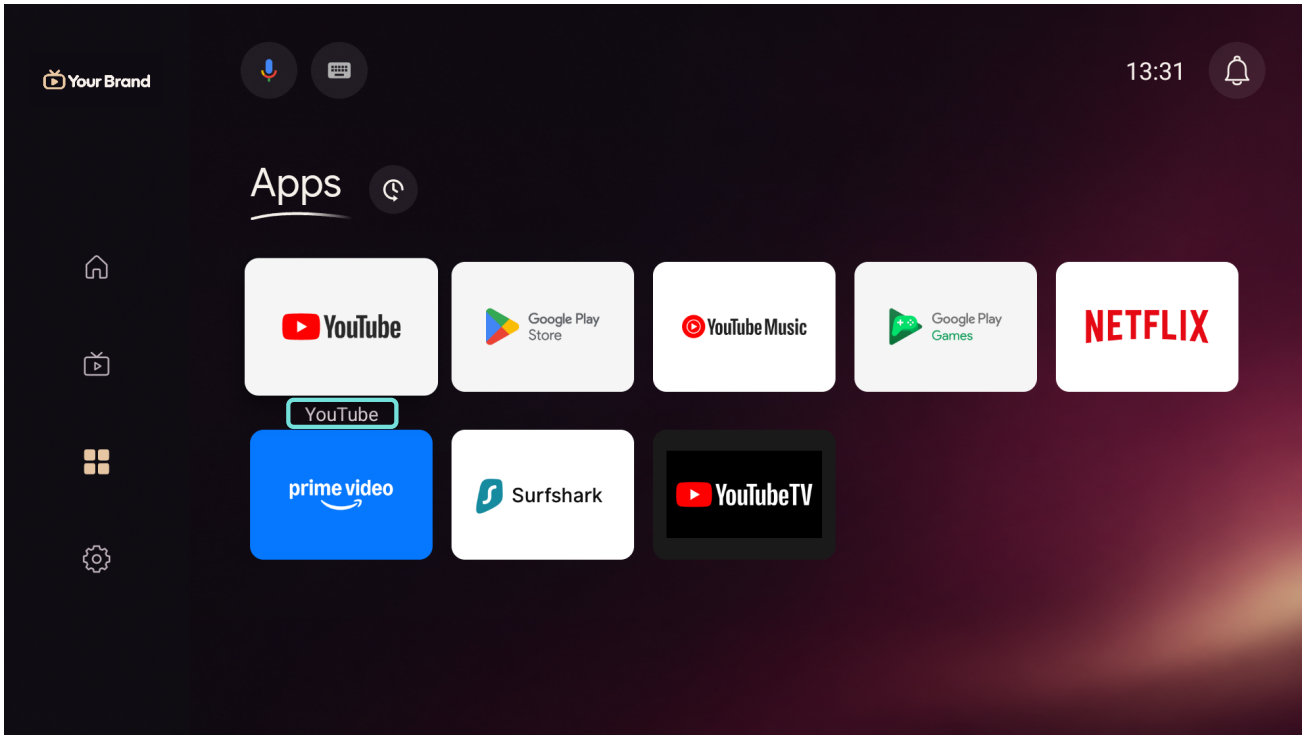

DESIGN ADVICE AND LIMITS

Soft ivory keeps the heading readable and ties it to the clock and utility artwork. One value colors both title and arc. It does not recolor Android Settings, notification-panel text or the Add Favorite App panel title.

Application name labels

home.app_name_text_color

Color

Device capture | 2620031578004508 | 22 October 2026

Enlarged detail from device capture

VISIBLE EFFECT

App-name labels associated with launcher app cards, including the focused Home app label.

BASE DEFAULT / FALLBACK

#FFE5E5E5

SUGGESTED EXAMPLE

#FFE4D9DF

Illustrative swatch

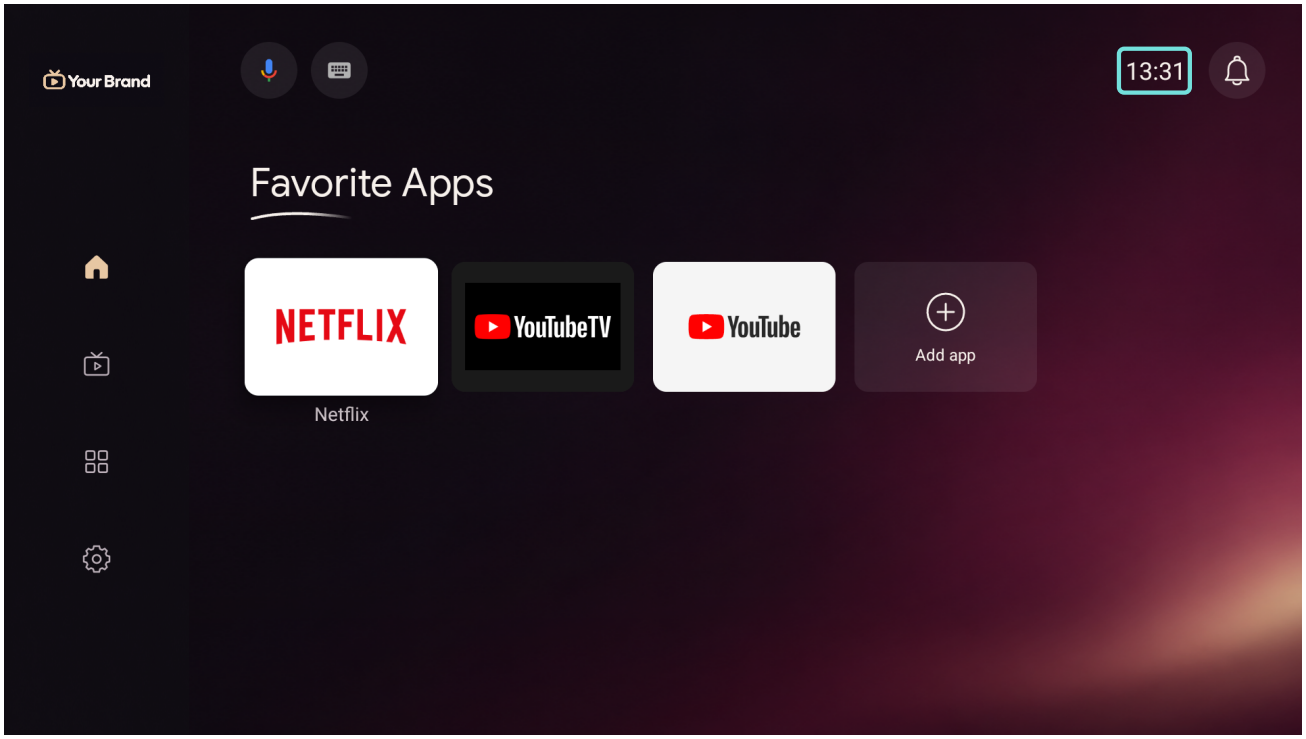

DESIGN ADVICE AND LIMITS

Warm pale gray complements the ivory headings without introducing another accent color. This changes launcher label text, not the text or logos embedded in app-banner artwork. Add app is styled separately.

Clock digits

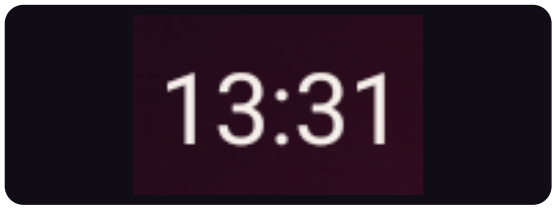

home.clock_text_color

Color

Device capture | 2620031578004508 | 22 October 2026

Enlarged detail from device capture

VISIBLE EFFECT

The time displayed in the top-right function area.

BASE DEFAULT / FALLBACK

#FFE5E5E5

SUGGESTED EXAMPLE

#FFF7F1EC

Illustrative swatch

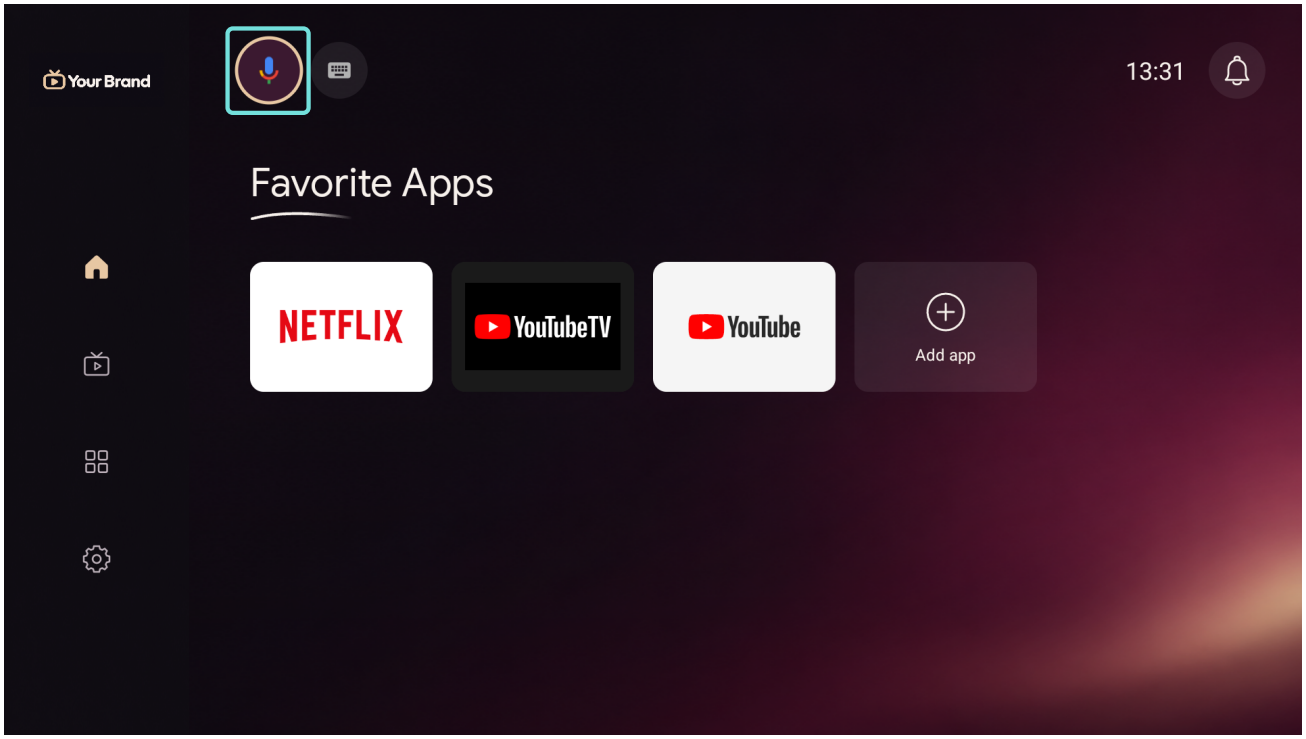

DESIGN ADVICE AND LIMITS

Use ivory to keep the time clear and visually calm. This option controls digit color only. home.clock_visible controls whether the clock is shown. The device supplies time and time format.

Focused action-button fill

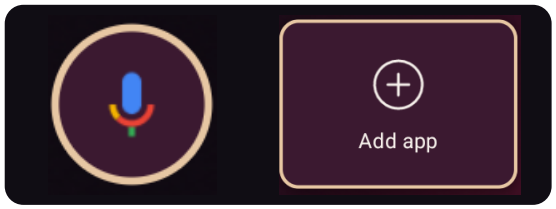

home.action_button_focused_color

Color

Device capture | 2620031578004508 | 22 October 2026

Top action and Add App - device crops

VISIBLE EFFECT

Focused Mic, Keyboard, Notifications and Sort buttons, plus the focused Add App card.

BASE DEFAULT / FALLBACK

#E60098B0

SUGGESTED EXAMPLE

#FF3B1930

Illustrative swatch

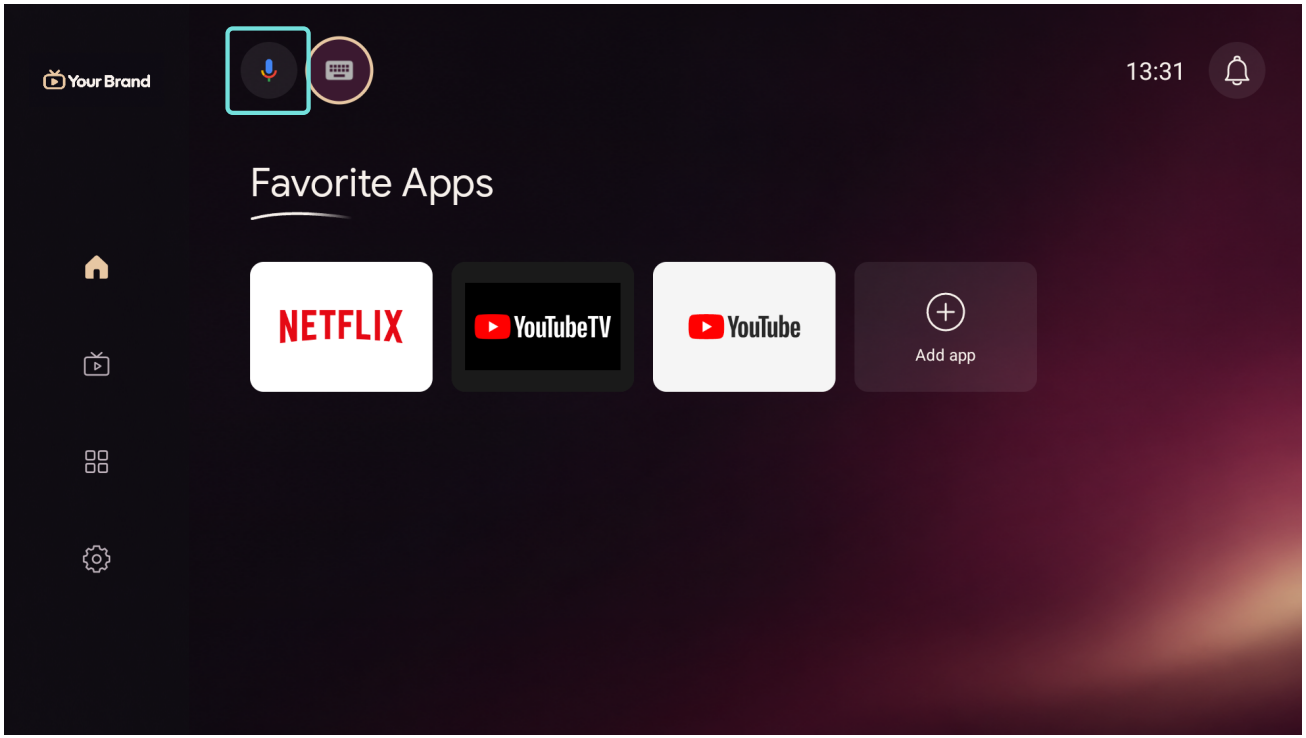

DESIGN ADVICE AND LIMITS

Deep wine gives focus a warm, subtle fill; pair it with the champagne focus outline. It does not recolor microphone or keyboard artwork. Add App is included even though older schema descriptions mention only the top buttons.

Idle action-button fill

home.action_button_unfocused_color

Color

Device capture | 2620031578004508 | 22 October 2026

VISIBLE EFFECT

Unfocused Mic, Keyboard, Notifications and Sort fills, and the idle Add App card.

BASE DEFAULT / FALLBACK

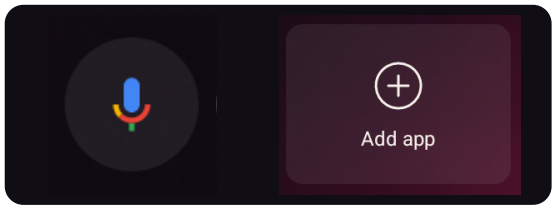

#1EFFFFFF

SUGGESTED EXAMPLE

#14F7F1EC

Illustrative swatch

Top action and Add App - device crops

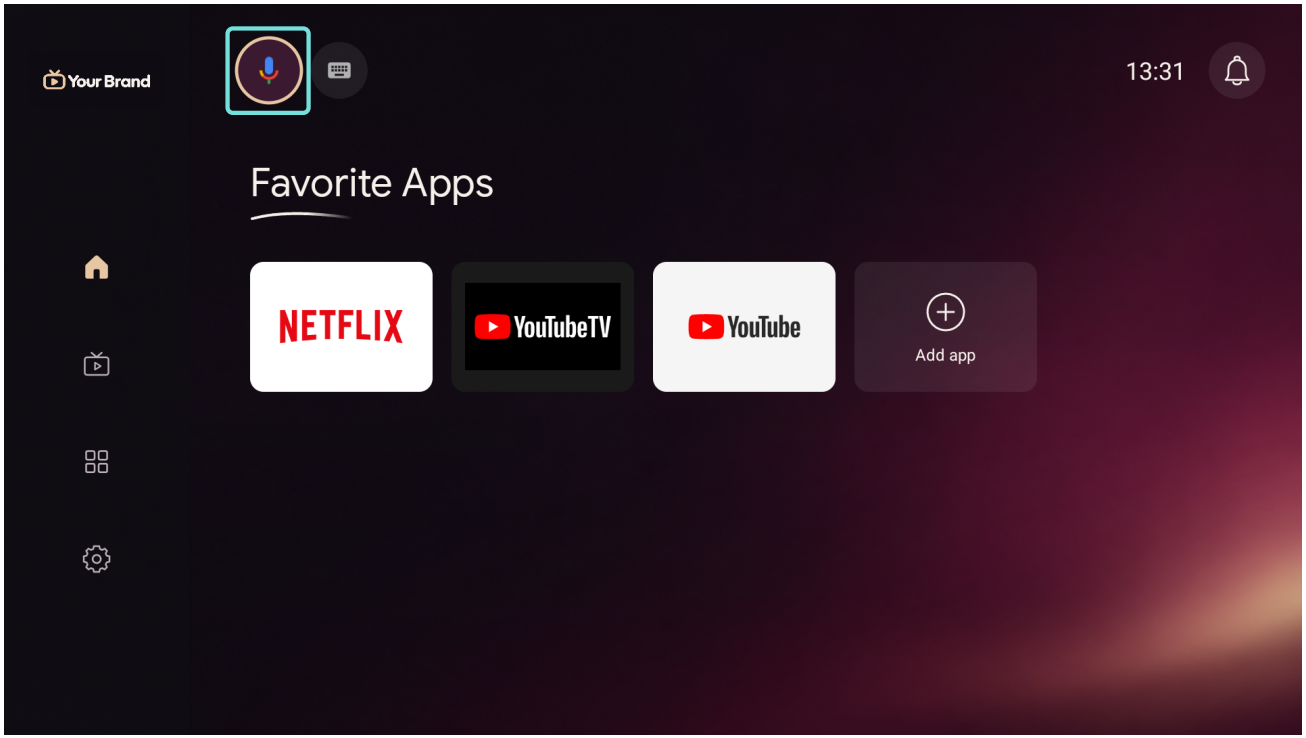

DESIGN ADVICE AND LIMITS

The suggested ivory fill is only 20/255 opaque, so the dark wallpaper remains visible through the control. The leading 14 in #14F7F1EC is alpha, not part of RGB. Use the same opacity language when comparing controls against different backgrounds.

Focused action-button outline

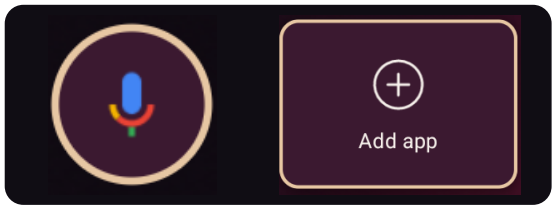

home.action_button_focus_stroke_color

Color

Device capture | 2620031578004508 | 22 October 2026

Top action and Add App - device crops

VISIBLE EFFECT

The focus ring around Mic, Keyboard, Notifications and Sort; also the Add App focus border.

BASE DEFAULT / FALLBACK

#FFFFFFFF

SUGGESTED EXAMPLE

#FFE7C7A3

Illustrative swatch

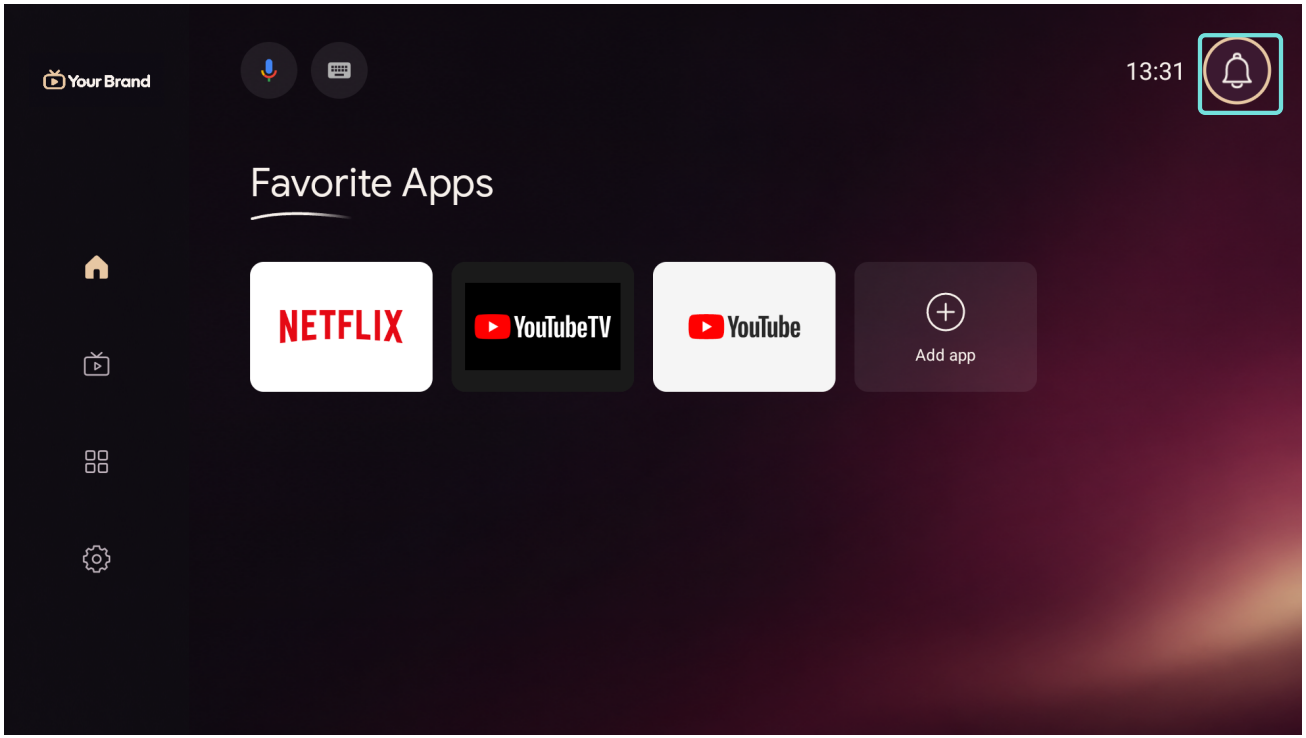

DESIGN ADVICE AND LIMITS

Champagne provides a recognizable focus accent without a bright neon edge. The INI controls outline color. Shape, stroke width, focus scaling and corner radius remain resource-defined.

Bell, Sort and Add App artwork

home.utility_icon_color

Color

Device capture | 2620031578004508 | 22 October 2026

VISIBLE EFFECT

Notification bell and Sort artwork, plus the Add App plus symbol and label.

BASE DEFAULT / FALLBACK

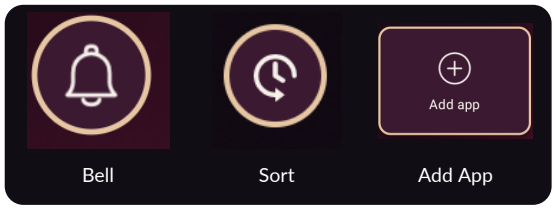

#FFFFFFFF

SUGGESTED EXAMPLE

#FFF7F1EC

Illustrative swatch

Bell, Sort and Add App - device crops

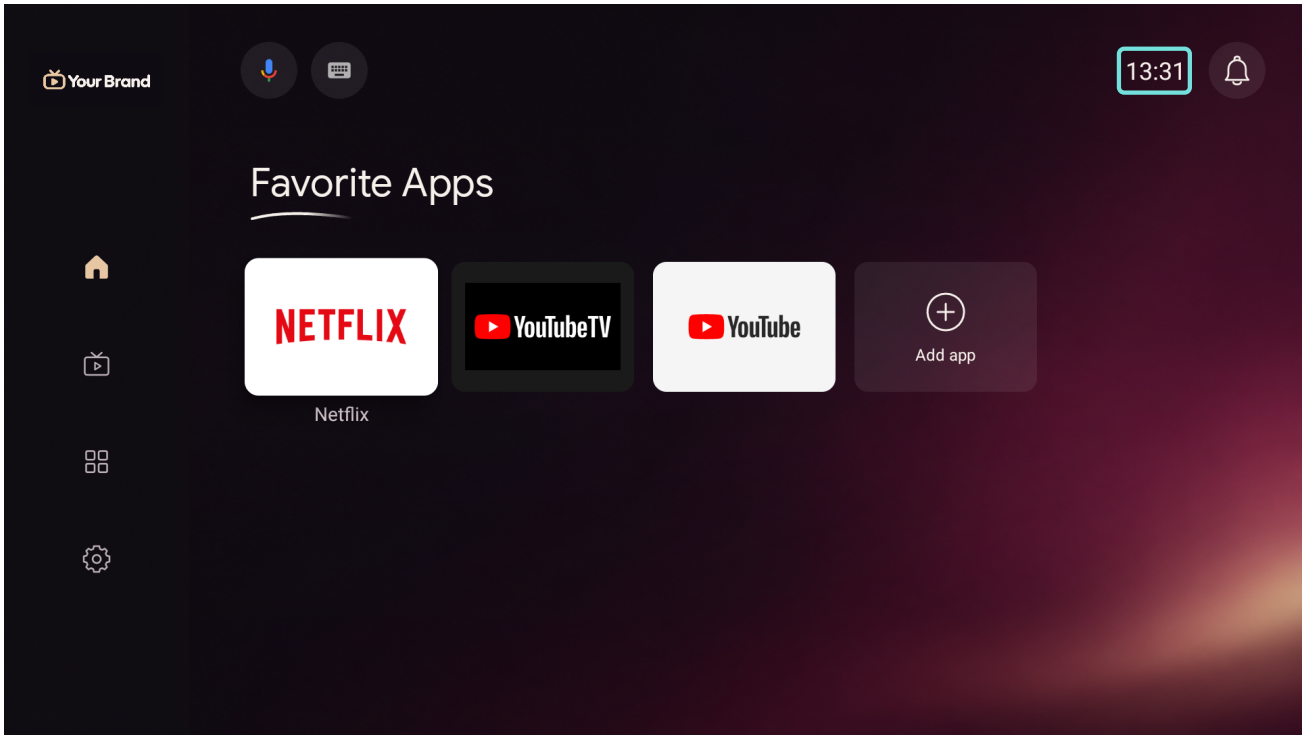

DESIGN ADVICE AND LIMITS

Ivory unifies utility artwork and keeps Add app legible against its translucent fill. It does not recolor the Google microphone, Keyboard artwork, side Settings icon or notification-panel content. Notification badges have separate source styling.

Clock visibility

home.clock_visible

Boolean

Device capture | 2620031578004508 | 22 October 2026

VISIBLE EFFECT

Shows or hides the clock in the top function area.

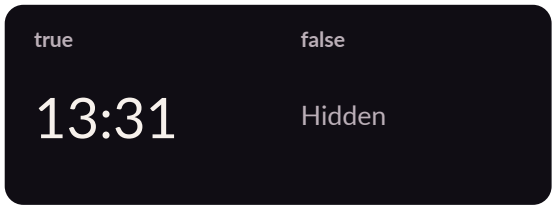

BASE DEFAULT / FALLBACK

true

SUGGESTED EXAMPLE

true

Visibility comparison - illustration

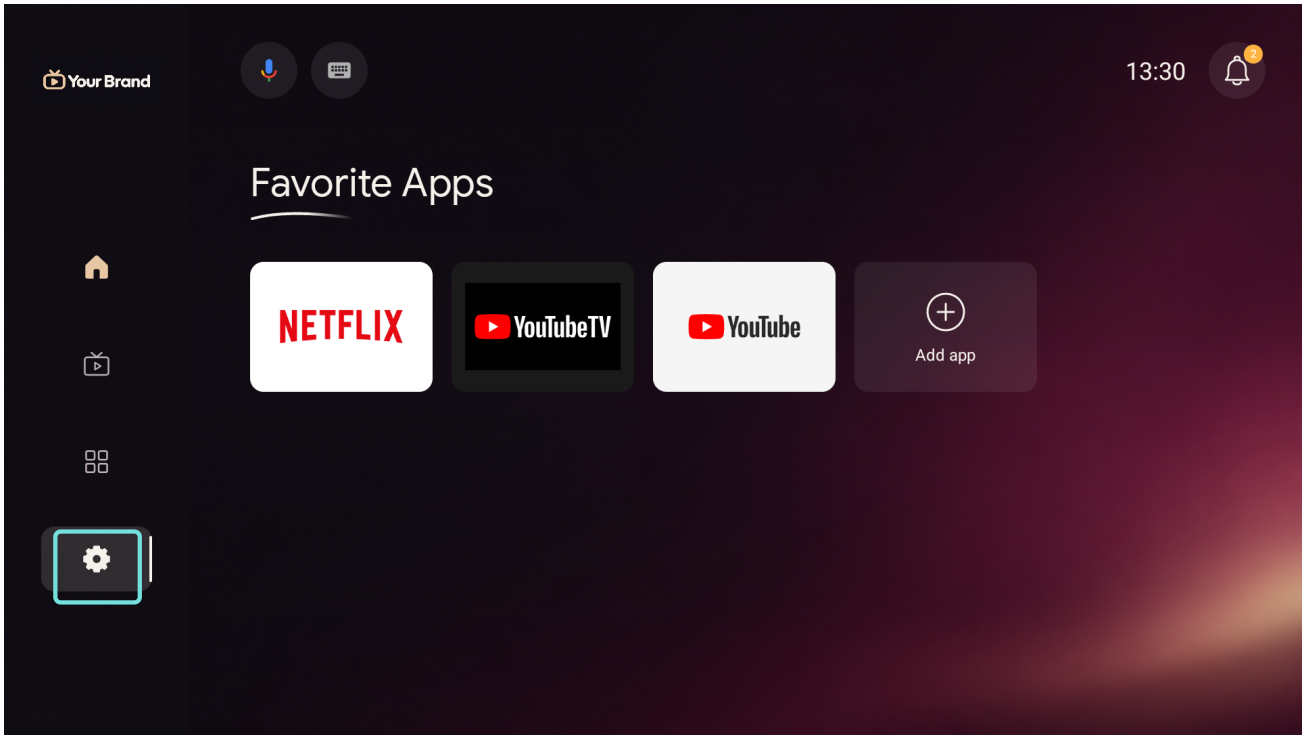

DESIGN ADVICE AND LIMITS

Keep true for the showcase. Use false in a focused content-led deployment if the time is unnecessary. Only clock visibility changes. This does not disable device timekeeping, hide the bell or change the clock color.

Settings entry visibility

home.settings_visible

Boolean

Device capture | 2620031578004508 | 22 October 2026

VISIBLE EFFECT

Shows or hides the Settings entry in the side navigation.

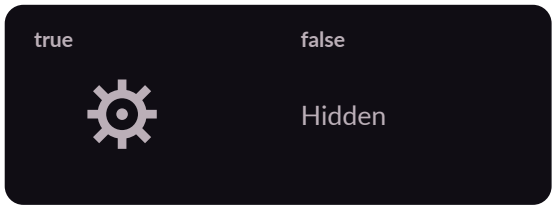

BASE DEFAULT / FALLBACK

true

SUGGESTED EXAMPLE

true

Visibility comparison - illustration

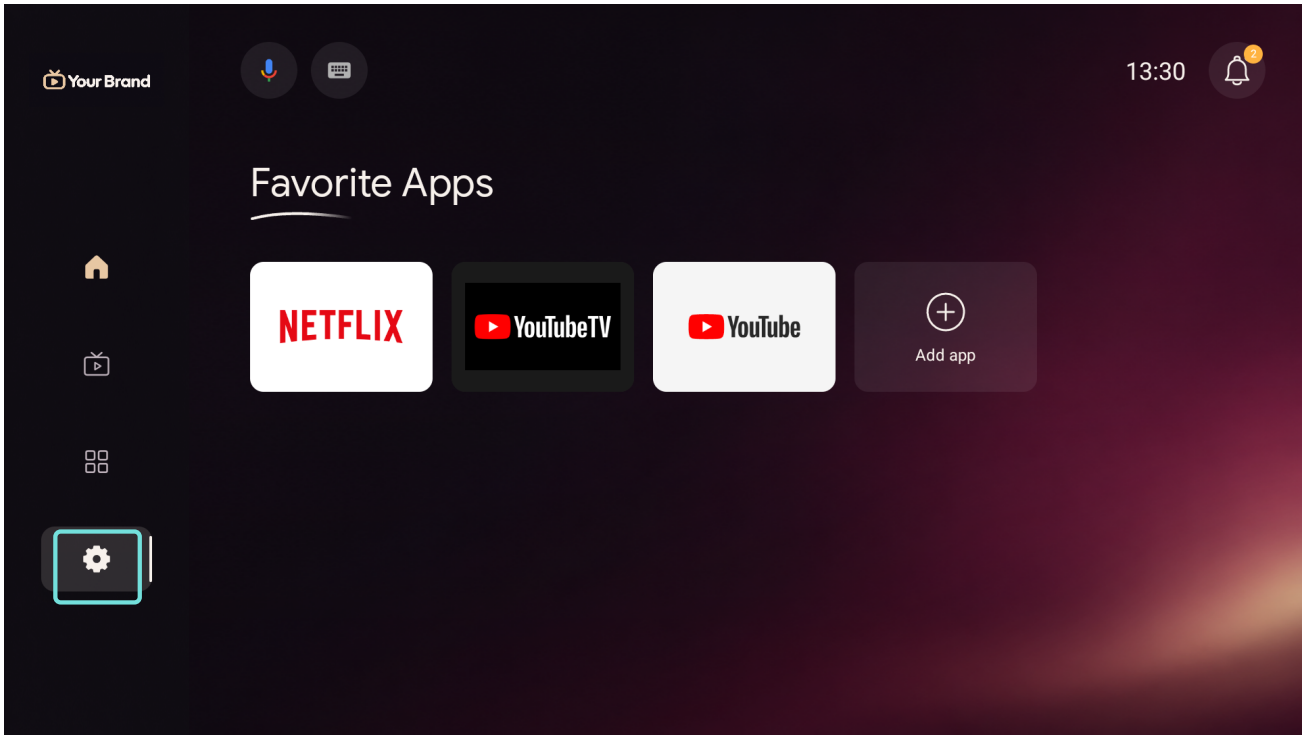

DESIGN ADVICE AND LIMITS

Keep true for a full-featured demonstration. A source-derived comparison below illustrates false. Hiding the launcher entry does not uninstall Settings or prevent access from other Android entry points.

Settings destination

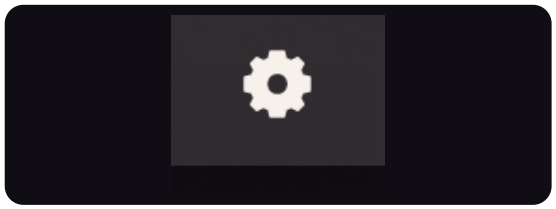

home.settings_component

Component

Device capture | 2620031578004508 | 22 October 2026

Enlarged detail from device capture

VISIBLE EFFECT

The Android activity opened when the viewer activates Settings.

BASE DEFAULT / FALLBACK

com.android.tv.settings/.MainSettings

SUGGESTED EXAMPLE

com.android.tv.settings/.connectivity.NetworkActivity

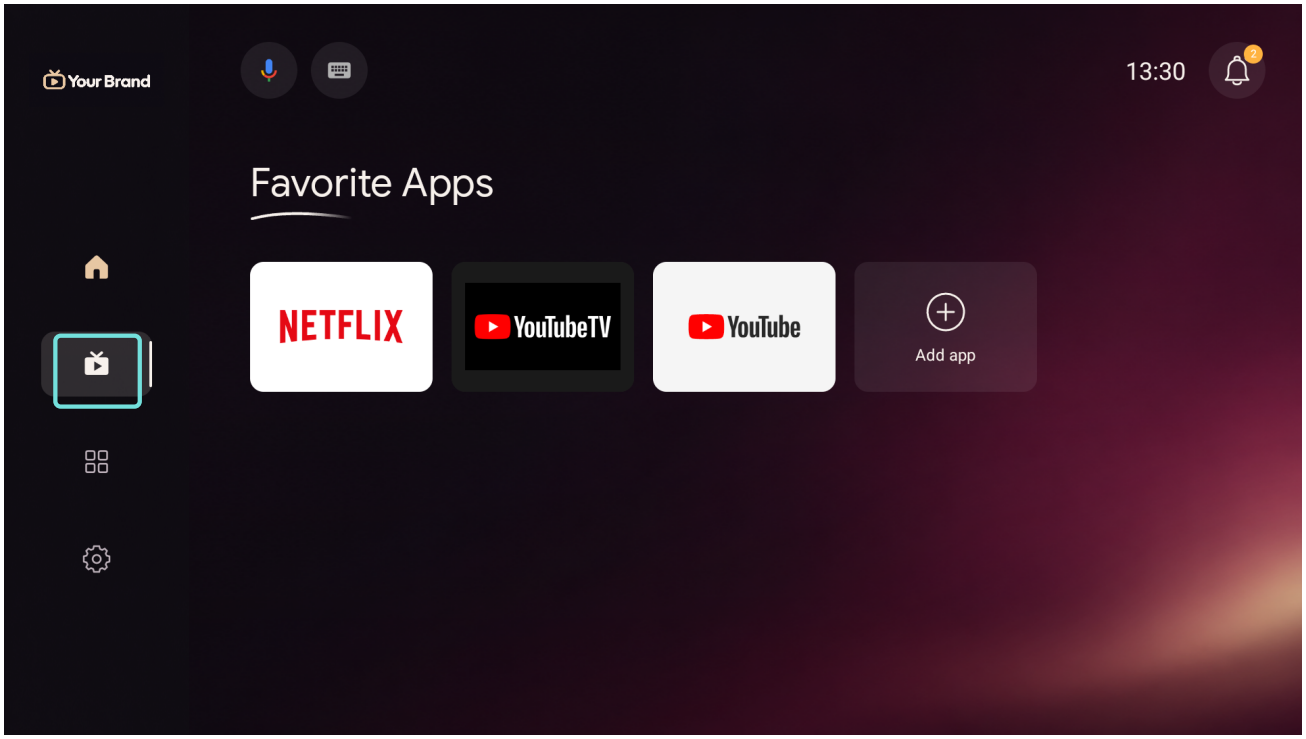

DESIGN ADVICE AND LIMITS

The example opens Network & Internet on the attached device. Use an installed component appropriate to the product. The component must be valid and available. This changes the destination, not the icon, its label or the Android Settings screen theme.

Live TV destination

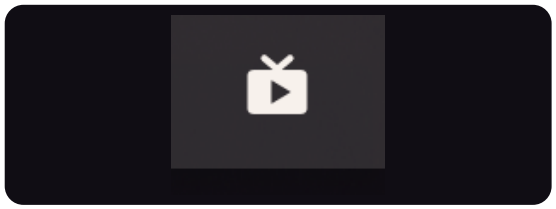

tvapp.package_id

Package ID

Device capture | 2620031578004508 | 22 October 2026

Enlarged detail from device capture

VISIBLE EFFECT

The app opened by the Live TV side entry and the launcher Live TV route.

BASE DEFAULT / FALLBACK

com.citrus.tv

SUGGESTED EXAMPLE

com.google.android.youtube.tvunplugged

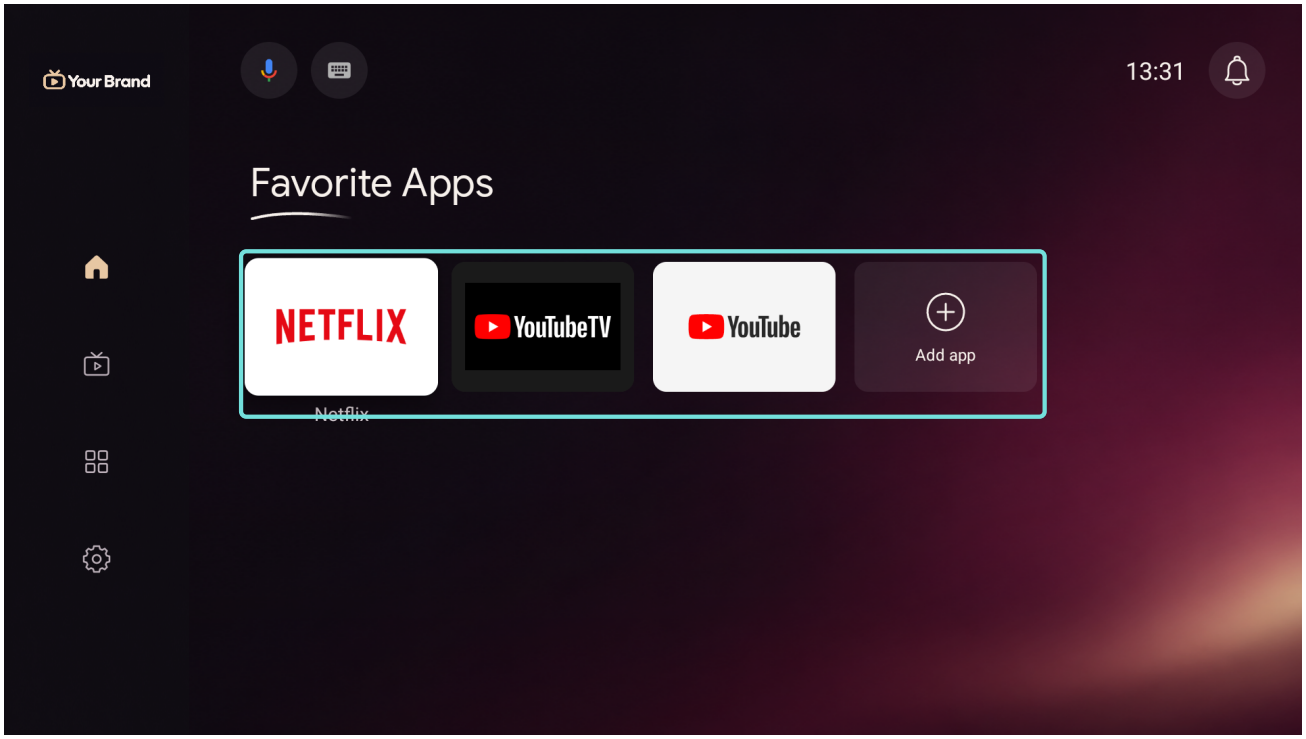

DESIGN ADVICE AND LIMITS

The example uses YouTube TV, which is installed on the reference device. Use an installed package with a suitable launch activity. Boot-resume behavior depends on product integration; this is not a universal TV-first boot switch.

Fixed apps after Netflix

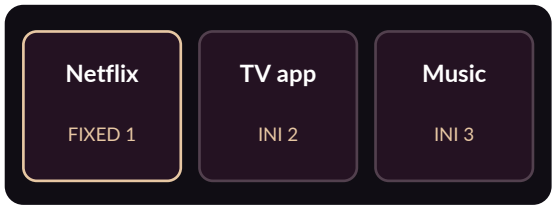

home.app_pinning_list

Ordered package list

Device capture | 2620031578004508 | 22 October 2026

Pin order - explanatory diagram

VISIBLE EFFECT

The ordered operator-pinned portion of Favorite Apps, starting at position 2.

WHEN UNSET

Product resource pin list

SUGGESTED EXAMPLE

com.example.tv,com.example.music

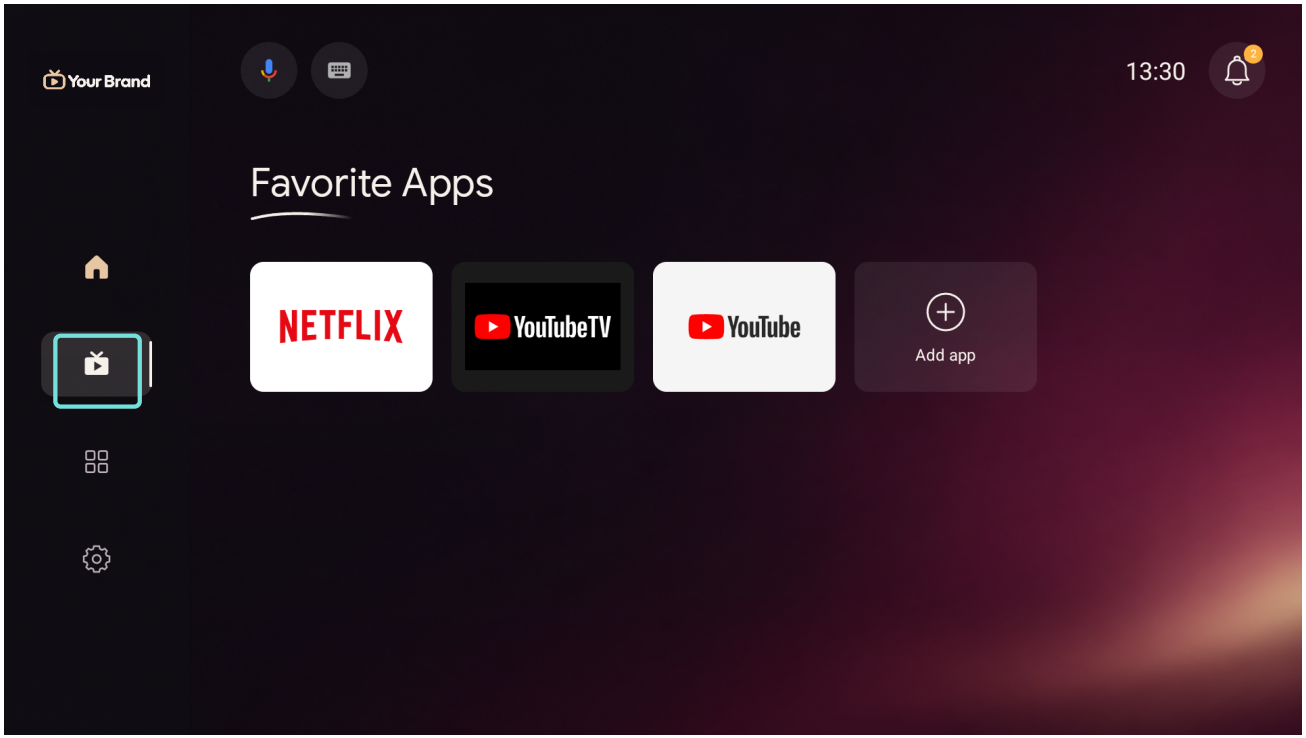

DESIGN ADVICE AND LIMITS

Example list: TV app, Music app. Netflix is always fixed in position 1 and is never part of this example list. Netflix cannot be removed or reordered through this list. Any Netflix entry is ignored. Empty means no extra INI pins; missing uses the product resource pin list after Netflix.

RED: open Live TV

key.link.red

Action URI

Device capture | 2620031578004508 | 22 October 2026

VISIBLE EFFECT

The action handled for the RED key while the launcher is in the foreground.

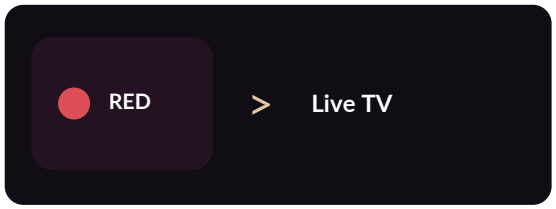

BASE DEFAULT / FALLBACK

Empty (no launcher override)

SUGGESTED EXAMPLE

aminotvlauncher://v1/livetv

Example key destination - illustration

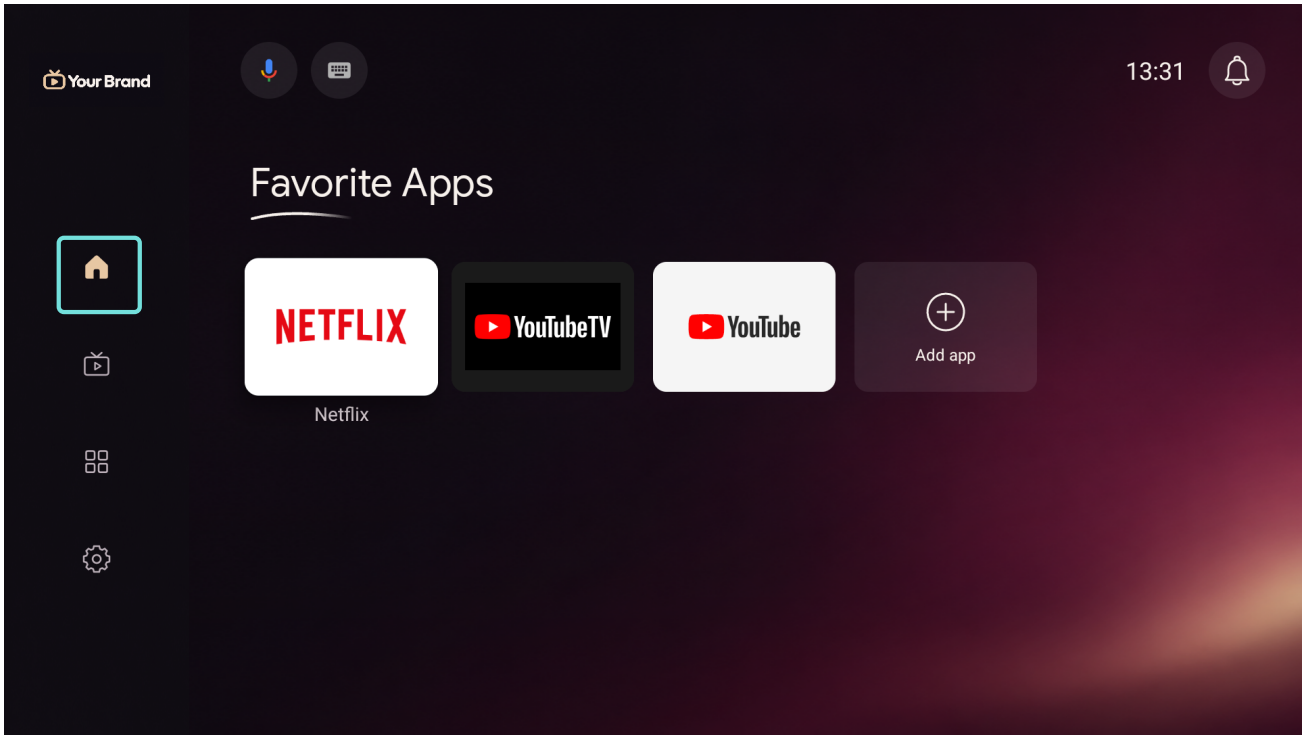

DESIGN ADVICE AND LIMITS

Route RED to Live TV. The destination app is chosen by tvapp.package_id. An empty mapping leaves no launcher override. A system-wide RED assignment outside the launcher is a separate Engage configuration.

GREEN: select Home

key.link.green

Action URI

Device capture | 2620031578004508 | 22 October 2026

VISIBLE EFFECT

The action handled for the GREEN key while the launcher is in the foreground.

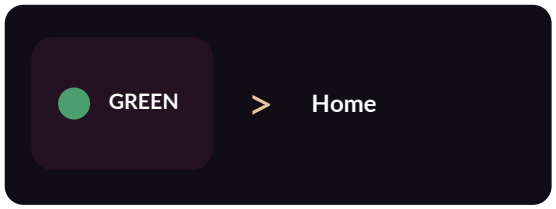

BASE DEFAULT / FALLBACK

Empty (no launcher override)

SUGGESTED EXAMPLE

aminotvlauncher://v1/home

Example key destination - illustration

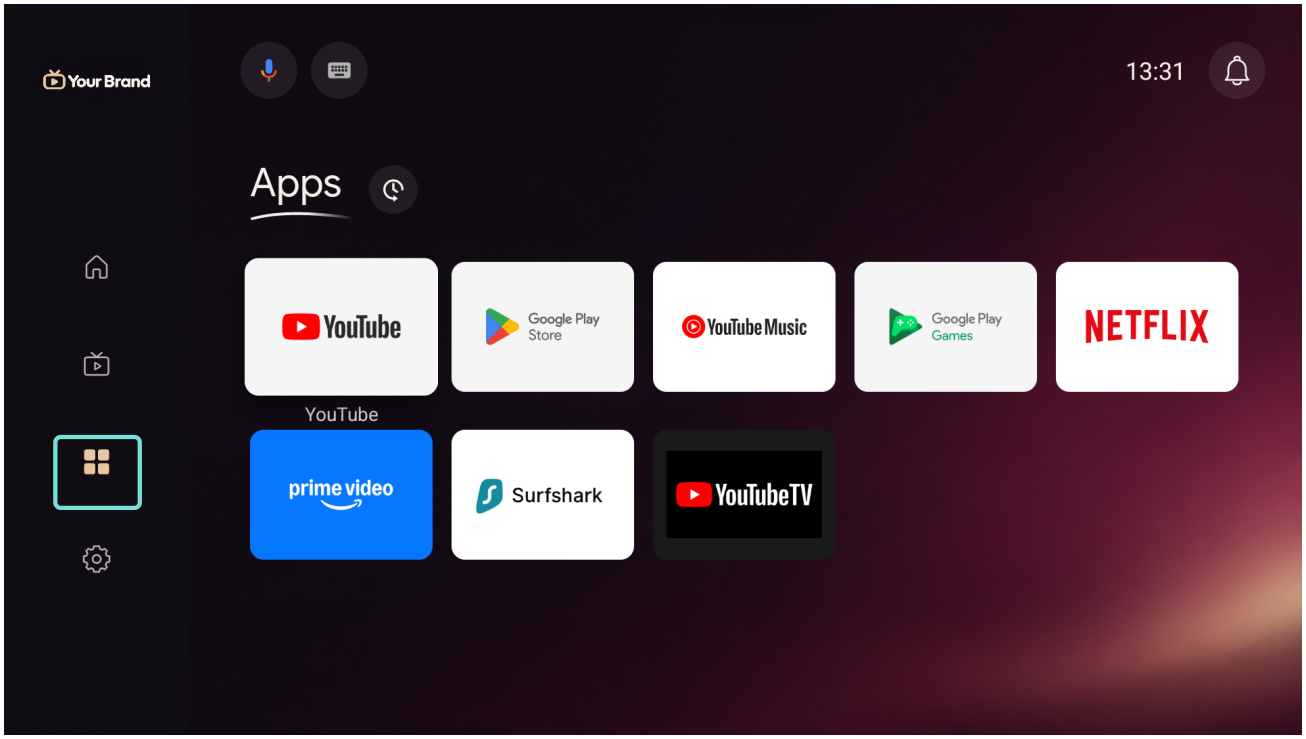

DESIGN ADVICE AND LIMITS

Route GREEN to Home and the Favorite Apps view. This foreground mapping alone cannot bring the launcher back from another app. System-wide GREEN requires the corresponding Engage key assignment.

YELLOW: open All Apps

key.link.yellow

Action URI

Device capture | 2620031578004508 | 22 October 2026

VISIBLE EFFECT

The action handled for the YELLOW key while the launcher is in the foreground.

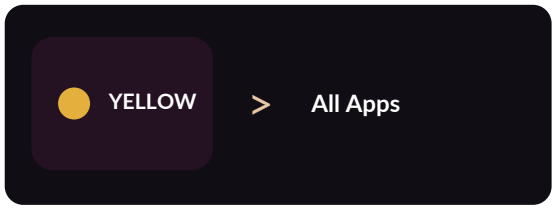

BASE DEFAULT / FALLBACK

Empty (no launcher override)

SUGGESTED EXAMPLE

aminotvlauncher://v1/apps

Example key destination - illustration

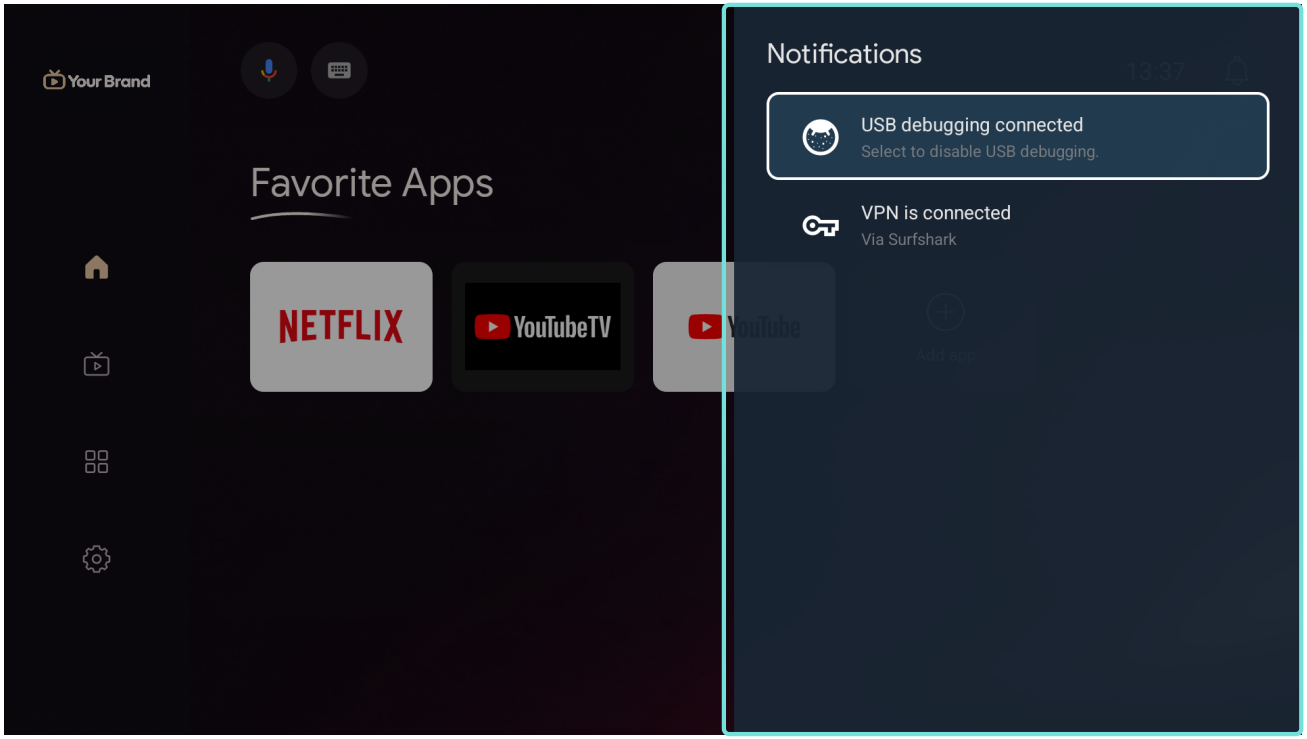

DESIGN ADVICE AND LIMITS

Route YELLOW to the installed All Apps grid. All Apps ordering is separate from Favorite Apps pin positions. Alphabetical or recent sorting does not move Netflix within Favorite Apps.

BLUE: open Notifications

key.link.blue

Action URI

Device capture | 2620031578004508 | 22 October 2026

VISIBLE EFFECT

The action handled for BLUE while the launcher is foreground, on builds with notification integration.

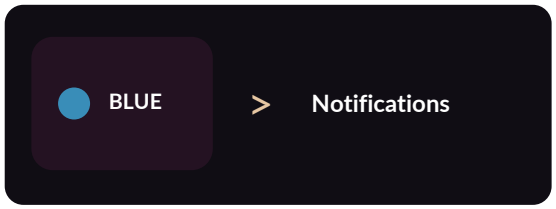

BASE DEFAULT / FALLBACK

Empty (no launcher override)

SUGGESTED EXAMPLE

aminotvlauncher://v1/notifications

Example key destination - illustration

DESIGN ADVICE AND LIMITS

Route BLUE to Notifications when supported by the product build. Notification integration is controlled by a build resource, not a visibility INI. The panel shown is a real device capture; physical color-key mappings were not exercised in this session.

The complete showcase appearance profile

Colors use #AARRGGBB. The editable INI file contains the same values and placeholder image URLs.

home.button_focused_color
#FFF7F1EC

home.button_selected_color
#FFE7C7A3

home.button_unselected_color
#FFBBAFB8

home.header_text_color
#FFF7F1EC

home.app_name_text_color
#FFE4D9DF

home.clock_text_color
#FFF7F1EC

home.action_button_focused_color
#FF3B1930

home.action_button_unfocused_color
#14F7F1EC

home.action_button_focus_stroke_color
#FFE7C7A3

home.utility_icon_color
#FFF7F1EC

home.background_url	background-bordeaux.png
home.side_panel_background_url	sidebar-bordeaux.png
home.logo_url	your-brand-bordeaux.png

Host each bitmap at its own reachable HTTP/HTTPS URL. The example.com addresses are placeholders. Use separate files for the main wallpaper and sidebar, and a new URL when replacing an image.

Apply, refresh and verify the UI

1 Deliver the INI

Publish supported definitions and values through your normal Engage provisioning. Confirm that the target apps and activities are installed.

2 Refresh the launcher

Supported INI-update broadcasts reload changed settings. Remote artwork downloads asynchronously; use a new URL for a revised asset.

3 Check every state

Inspect Home, All Apps, side focus, top controls, Add App, the clock and destination actions. Confirm Netflix remains first in Favorite Apps.

Formats and fallback

Use #RRGGBB or #AARRGGBB for colors; true/false for visibility. Invalid colors and booleans use resource defaults. An unavailable INI provider retains the last-known configuration.

Artwork and caching

HTTP/HTTPS bitmaps: download limit 8 MiB, source dimensions up to 16384px, decoded size bounded to 4096px. A usable same-URL cache is reused. Missing or failed artwork uses a built-in fallback.

Capture scope: Amigo7N, Android 14, Amino TV Launcher 0.10, serial 2620031578004508. Nineteen raw captures are retained. Navigation used launcher routes and DPAD input; physical color-key behavior, hidden states and boot startup were not retested. No configuration was changed. The device was returned to Home.

Source scope: all 23 options in the local ini.xml were reviewed against LauncherConfiguration, LauncherAppearance, LauncherImageCache, side-navigation state logic, LaunchItemsManager and action routing. Base resources are not a claim about every product default. An installed-version match alone does not establish source/binary equivalence.

Source revision: 822b627d79491d8ccf635d7e9712d214e33eaa2e

Source references, option catalog, capture hashes and rebuild instructions accompany this PDF.
